PUMP SYSTEMS

SIX DECADES OF PUMP SYSTEMS

Beinlich Pumpen GmbH is an international supplier of dosing and transfer pumps for industrial applications in process plants. Beinlich offers a large selection of high capacity external and internal gear pumps, high pressure radial piston pumps and progressive cavity pumps. Beinlich has technical knowledge from more than 60 years in pump system technology. Both the optimal evaluation of individual customer requirements as well as the close monitoring of markets leads to a continuous development of our products. Beinlich, headquartered in the German city of Gevelsberg, was founded in 1951 and is part of the Echterhage Group.

CUSTOMER-SPECIFIC DESIGN

In addition to standard pump series, Beinlich also designs innovative and efficient individual system solutions which are realised according to customer requirements for various demanding applications. Beinlich collaborates closely with its customers throughout all stages of planning and production: from the initial enquiry right up to assembly and commissioning. In-house construction, development and production enable short development times and ensure a high level of quality. Working closely with our clients from the initial project development helps us streamline the design, assembly and commissioning processes to follow.

APPLICATIONS FOR VARIOUS INDUSTRIES

With its high-precision gear pumps, Beinlich is one of the leading suppliers worldwide in adhesive bonding and dosing technology. Complete pump units or individual components manufactured by Beinlich are applied in the chemical, dyes and paints, coatings, oil hydraulics, plastics, food and pharmaceutical industries among others, in two- and multi-component machines as well as in the shipbuilding, aircraft and aerospace construction.

COMPETENT GLOBAL PARTNERS

We provide personal and competent consultations in all important industrial countries around the world. Long-standing cooperation partners as well as our own distribution and service companies in Italy, France, United Kingdom, USA, India and China, guarantee perfect on-site service, quality support and application expertise. Our employees and partners are constantly trained to ensure the quality standards of Beinlich. Our worldwide clients benefit from our technical know-how and short development and delivery intervals.

INTEGRATED SYSTEM SOLUTIONS

By cooperating with our partner companies VSE and DST, Beinlich develops integrated system solutions with flow meter and magnetic coupling according to customer request. By offering complete systems at a single source, we are able to achieve optimal performance for our clients.

OPERATING CONDITIONS

SPEED

10 - 1,750 rpm (Depending on the respective operating conditions)

PUMP PRINCIPLE

External spur gears

ROTATION

Clockwise (cw), right Counterclockwise (ccw), left

VISCOSITY

0.8 - 1,000,000 mPa·s (Depending on the respective operating conditions)

DISPLACEMENTS CC/REV

See chart on page 5.

TEMPERATURE

-20°C up to +150°C (standard version)
Special designs are available up to 350°C

OPERATING PRESSURE*

Operating pressure max. 200 bar Varies with size and material specification. See chart on page 5 for details.

MATERIALS

achieved.

316 stainless steel body with 440B wear parts, or cast iron body with hardened steel wear parts.

ZPD gear pumps are specifically used for wide flow range metering applications and transfer applications. Volumetric efficiency values of over 90% are typically

COMMON APPLICATIONS

Metering of polyurethanes, isocyanate, polyol, catalyst, additives, silicones, adhesives, oils and diesel fuel

- Low-pulsation and precise dosing of the medium being transferred
- High pressures
- Large flow range
- Multiple construction material options
- Multiple sealing options

^{*}depending on rotation speed and viscosity

Sizes up to 2,600 cc/rev available on request.

The high-precision ZPDA dosing pumps are specifically designed for start stop dosing. The low pulsation gear design provides a constant flow with very rapid pressure build-up. Internal clearances based on fluid viscosities are held within a few microns to insure the highest efficiency possible, even at high differential pressures up to 200 bar. Depending on the application, DLC coatings are available for the wetted parts to provide additional corrosive resistance and abrasive particle resistance as well. Direct mounting of a VSE flow meter on the rear plate is also available for closed loop control.

OPERATING CONDITIONS

SPEED

1 - 200 rpm (Depending on the respective operating conditions)

PUMP PRINCIPLE

Low pulsation external spur gears

gned for high precision dosing of thermally reactive fluids. Its protected sealed needle bearing system eliminates material contact with bearings preventing shear and frictional heat in these areas normally associated with external gear pumps. Because of this innovation there is a notable reduction in the amount of solvent required to flush the pump and downtime between jobs. This also leads to overall improved efficiency, typically > 95%. The DARTec® is also available in a low weight construction (700 grams) and is optimal for use on 3 and 4 axis robot dispensing equipment.

CUSTOM OEM SOLUTIONS

In direct cooperation with the customer and in a very short time, Beinlich develops and produces solutions which meet the demands and specific requirements of the application. Standard materials like steel or stainless steel can be used as well as special materials (e.g. titanium, PEEK).

Additionally, the customer can also choose from different shaft seals, e.g. mechanical contact seal with block chamber or a leakage free magnetic coupling, to achieve an optimum of efficiency.

DOSING UNIT WITH INTEGRATED FLOW METER

All Beinlich pumps can be delivered complete with motor, bell housing and coupling. Mounting of VSE flow meter on many sizes is also a standard option.

ABRASIVE MATERIAL PUMPS

KIG-SERIES METERING GEAR PUMP FOR ABRASIVE FILLED MATERIALS

- 0.25 517 cc/rev
- Pressure up to 150 bar
- Viscosities from 1 to 1,000,000 mPa·s
- Completely hardened parts
- Abrasive resistant coatings
- Ceramic wear parts
- Mechanical seal with barrier chamber and bearing support

For heavily filled applications with:

- Titanium dioxide
- Carbon black
- Granite sand
- Manganese dioxide
- Silicone
- Calcium carbonate
- Aluminium trihydrate

DRUM PUMPS

- 0.25 517 cc/rev
- Pressure up to 200 bar
- Viscosities from 1 to 200,000 mPa·s
- Speeds up to 100 rpm
- Block chamber solutions
- KIG version available
- Custom mounting solutions
- Speed control standard
