ABOUT US

Rotary Power specialises in the design, development and manufacture of hydraulic motors and pumps.

With a history dating back over 50 years, we understand the exacting and demanding requirements of today's hydraulic applications.

Operating from 18,000 sq. m. of purpose built manufacturing facilities, based in the North East of England and Bangalore, India, we continue to invest in the latest CNC machinery, automation and testing facilities. We have a clear focus on continuous improvement in lean cellular manufacturing. These facilities, alongside our European and US operations, offer sales, service and production support for the entire Rotary Power product range. A worldwide network of distribution partnerships provide additional support all over the world.

OUR BUSINESS

We recognise the importance of developing partnerships with our customers. That's why we offer flexibility in design, delivery and service to meet our customer's requirements.

Partnerships with our supply chain are key to Rotary Power's success and allow us to deliver excellent service in order to exceed expectations.

OUR PEOPLE

People are at the centre of everything we do. As an innovative engineering and manufacturing business we take recruitment and career development very seriously.

As part of the British Engines Group, we operate a training and development programme that maintains a strong focus on in-house manufacturing and a commitment to local employment. Our apprenticeship and graduate schemes provide the opportunity to develop and nurture engineering talent from an early stage.

OUR FUTURE

Whether in product design or internal processes and systems, our engineers are actively encouraged to develop new ideas within design and manufacturing. This ensures that we are at the forefront of customer and sector led innovation, whilst continuously improving our business.

Our team of in-house design engineers invest time into understanding our customer's application and work with them to deliver value added solutions, customised to their application.

XJ RANGE

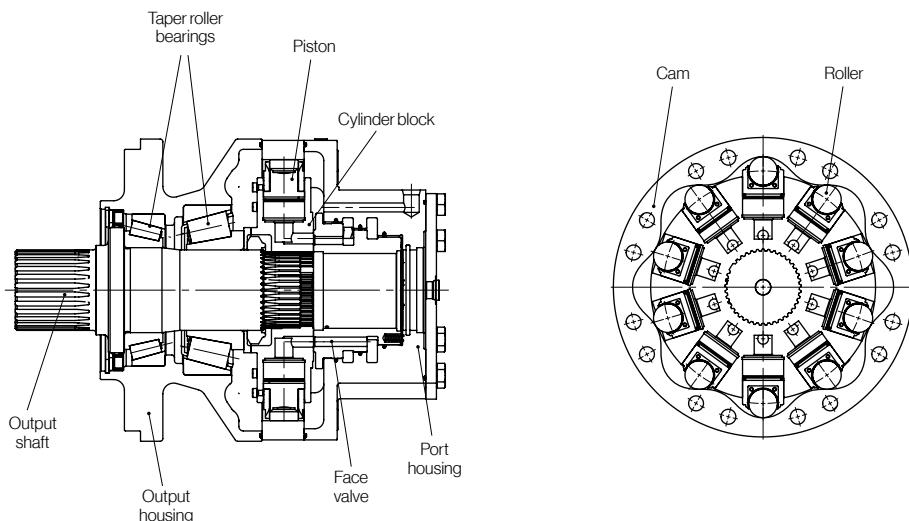

The XJ range of hydraulic motors offer displacements from 260 to 5,010 cc/rev. The XJ05 is the smallest of the range with displacements from 260 to 565 cc/rev, complemented by the larger XJ20 and XJ40 motors extending the displacement range to 2,505 and 5,010 cc/rev.

The XJ motor has a range of features and options designed to suit your specific application:

- Radial piston, multi-stroke operation
- Modular design
- Two speed options
- Parking brake options
- Freewheel capability
- Multiple mounting arrangements
- 350 bar continuous pressure
- Fast delivery options

The motor is designed with a rotating cylinder block connected to the drive shaft, which is mounted in taper roller bearings within the motor housing. This offers a high radial and axial load carrying capacity.

The pistons are located radially within the bores of the cylinder block. When oil is fed under pressure through the face valve and into the cylinder block, the pistons attempt to move outwards. The rollers react on the incline of the cam profile and this action produces rotation of the cylinder block.

The rate of flow to the motor will determine the speed at which the piston moves out against the cam ring and consequently the rotational speed of the motor. Once the power stroke is complete, the pistons return into the bore by the action of the reverse cam slope, ready for the next pressure cycle.

With units operating all over the world in a variety of applications including industrial, mobile and marine, the XJ range offers real application options for the future.

PRODUCT FEATURES

Fluids	HL; HLP to DIN 51524 Other specified fluids are possible.
Normal operating viscosity range	20 to 200 cSt
Maximum intermittent viscosity range	10 to 2,000 cSt
Normal operating temperature range	+15°C to +70°C [+59°F to +158°F]
Maximum intermittent temperature range	-20° to +80° C [-4°F to +176°F]
Fluid cleanliness	NAS 1638 class 9 / ISO code 18/15

FIRST DISPLACEMENT

Displacement option	A	B	C	D	E
Geometric displacement (cc/rev) [in³]	1,666 [101.7]	1,884 [115]	2,092 [127.7]	2,301 [140.4]	2,505 [152.9]
Specific torque (Nm/bar) [lbf.ft/psi]	26.5 [1.3]	30.0 [1.5]	33.3 [1.7]	36.6 [1.9]	39.9 [2.0]
Max. continuous speed (rpm)	125	115	100	90	85
Max. continuous power (kW) [hp]	70 [93.9]	70 [93.9]	70 [93.9]	70 [93.9]	70 [93.9]
Max. continuous pressure (bar) [psi]	350 [5,076]	350 [5,076]	350 [5,076]	350 [5,076]	350 [5,076]
Max. pressure (bar)* [psi]	450 [6,527]	450 [6,527]	450 [6,527]	450 [6,527]	450 [6,527]

SECOND DISPLACEMENT

Nominal displacement (cc/rev)	A	B	C	D	E
Geometric displacement (cc/rev) [in³]	833 [50.8]	942 [57.5]	1,046 [63.8]	1,150 [70.2]	1,252 [76.4]
Specific torque (Nm/bar) [lbf.ft/psi]	13.3 [0.7]	15 [0.8]	16.7 [0.9]	18.3 [1.0]	20.0 [1.0]
Max. continuous speed (rpm)	150	135	125	110	100
Max. continuous power (kW) preferred direction [hp]	47 [63]	47 [63]	47 [63]	47 [63]	47 [63]
Max. continuous power (kW) non-preferred direction [hp]	35 [46.9]	35 [46.9]	35 [46.9]	35 [46.9]	35 [46.9]
Max. continuous pressure (bar) [psi]	350 [5,076]	350 [5,076]	350 [5,076]	350 [5,076]	350 [5,076]
Max. pressure (bar)* [psi]	450 [6,527]	450 [6,527]	450 [6,527]	450 [6,527]	450 [6,527]

*Maximum values should only be applied for a small portion of the duty cycle.

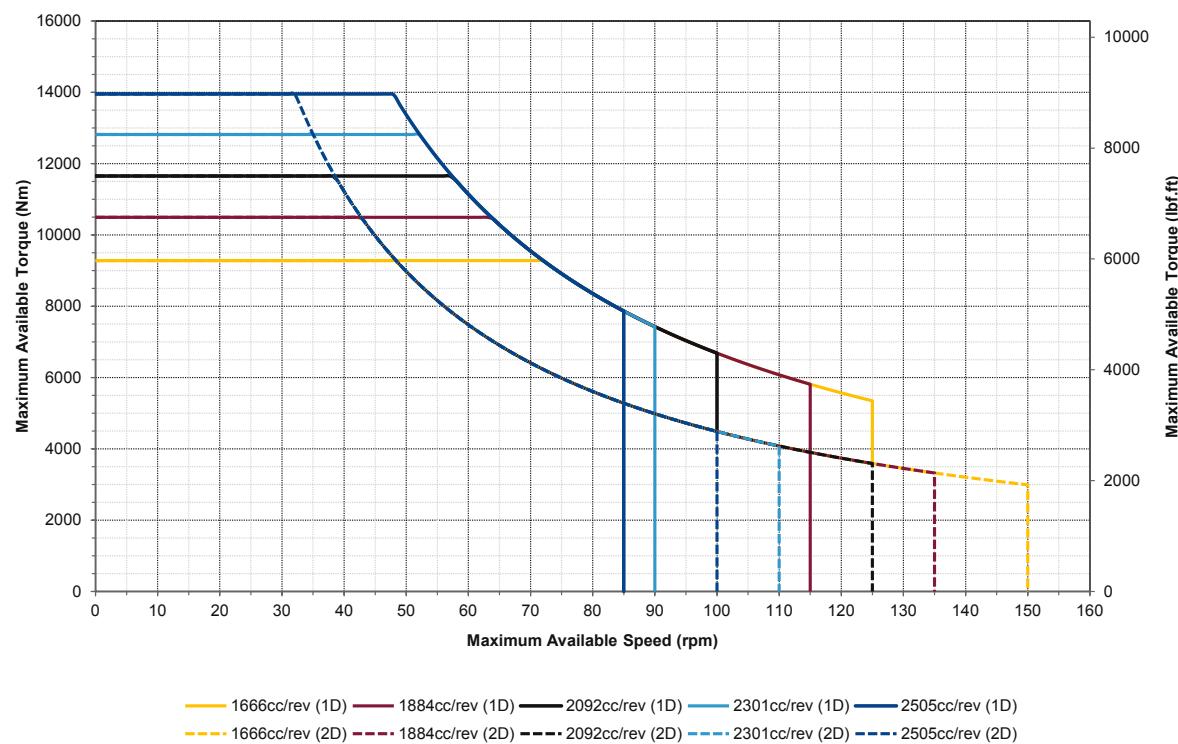

Weight of motor without oil

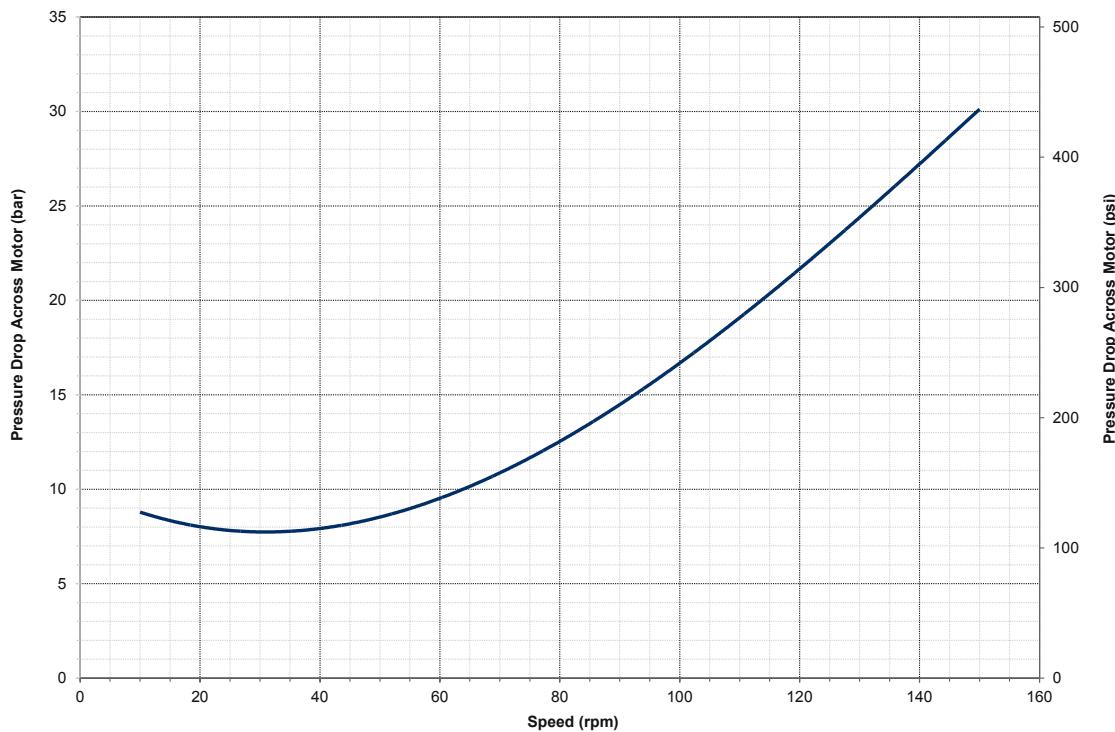

Sizes are listed in mm, inches shown in brackets

QUICK SELECTION DIAGRAM

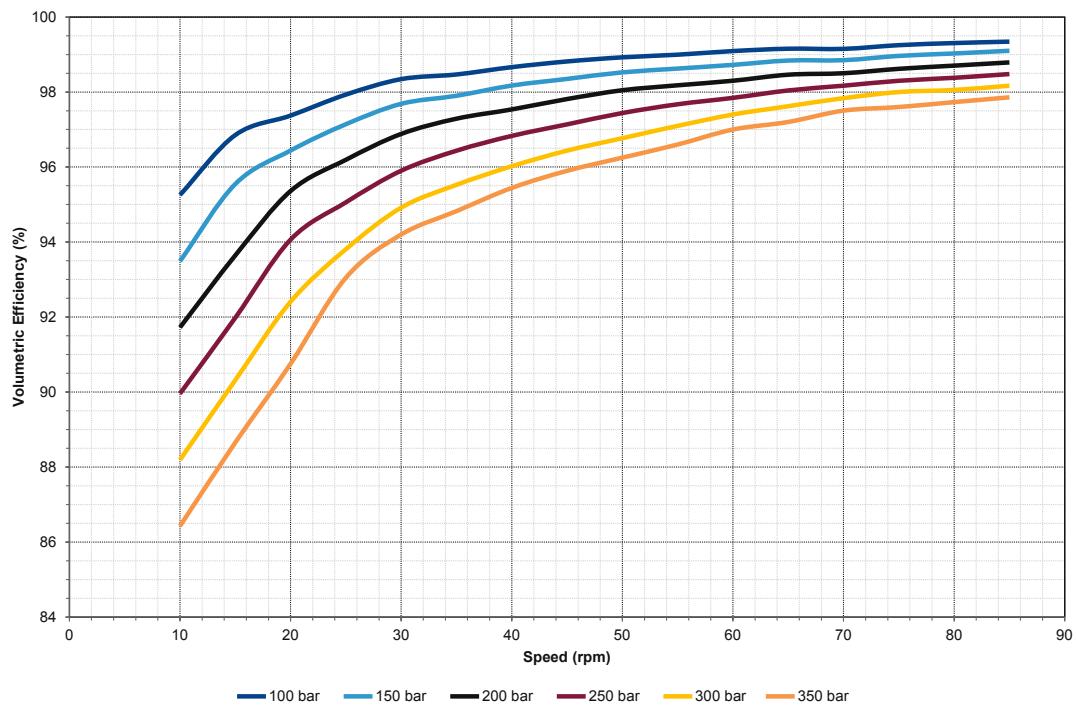

Based on your torque and speed requirements, the diagram below can be used to help determine which cam size best suits your application. Shown for both maximum displacement (1D) and minimum displacement (2D), the diagram outlines the limits of the motor based on its continuous power rating.

NO LOAD PRESSURE DROP

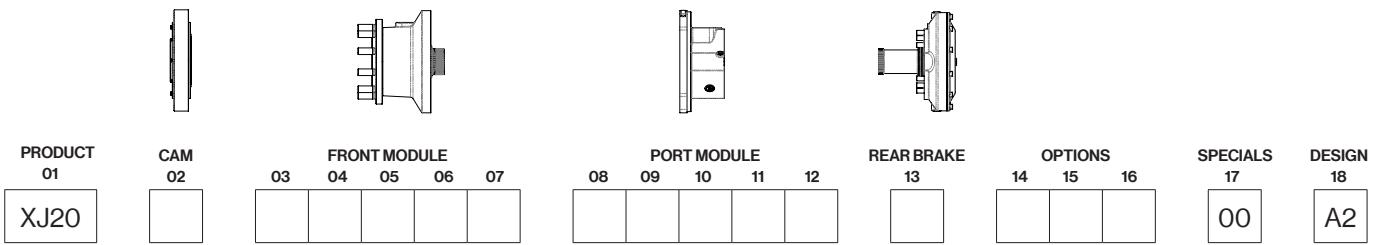

VOLUMETRIC EFFICIENCY

All performance graphs plotted for maximum displacement (2,505 cc/rev) using ISO46 fluid at 50°C.

All data is based on theoretical calculations.

PARKING BRAKES

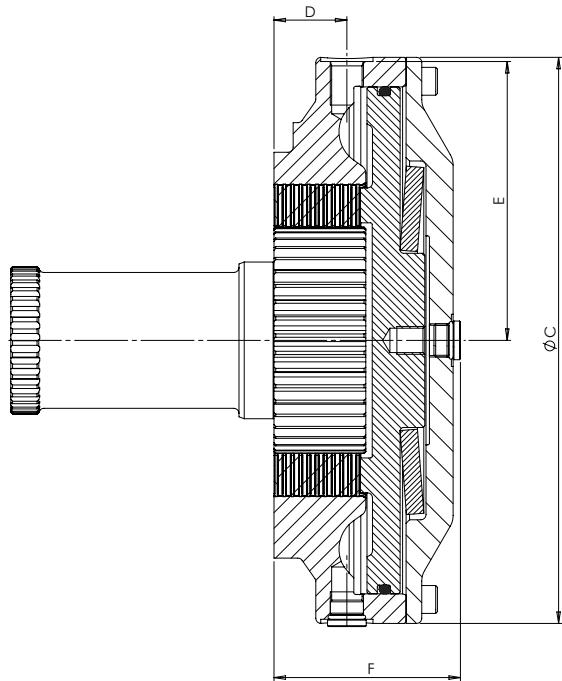

The XJ20 multi-disc parking brake is a spring applied, hydraulic release, fail safe brake designed to be used with XJ20 motors in static situations.

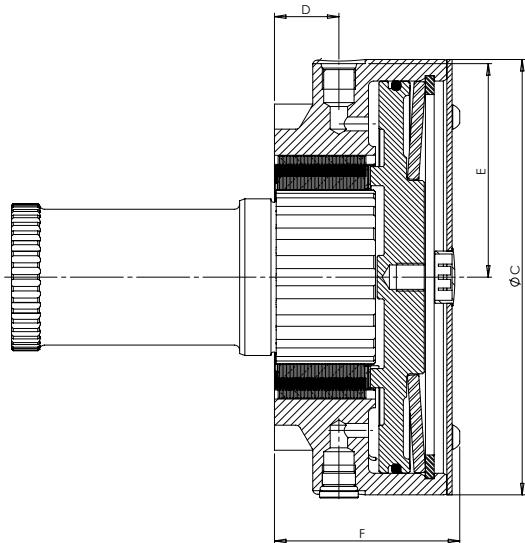

The multi-disc brake has a modular design which ensures it can be connected to any variant of the XJ20 motor.

The brake has two hydraulic release ports, one at the top of the housing and one at the bottom. The brake can be manually released by removing the plug in the cover and using an M16 screw to pull the piston back.

P BRAKE

Q BRAKE

	P	Q
Brake static capacity when new	13 kNm [9,588 lbf.ft]	18.6 kNm [13,276 lbf.ft]
Static capacity after ten dynamic uses	10 - 11.3 kNm (1)(2)(3) [7,375 - 8,334 lbf.ft] (1)(2)(3)	14 - 16.2 kNm (1)(2)(3) [10,326 - 11,950 lbf.ft] (1)(2)(3)
Volume to fill	800 cc [48.8 in ³]	470 cc [28.7 in ³]
Volume to fully release brake	180 cc [11 in ³]	70 cc [4.3 in ³]
Min. pressure to fully release brake	20 bar [290 psi]	12 bar [174 psi]
Max. acceptable pressure	30 bar [435 psi]	30 bar [435 psi]
Time to release brake	< 0.5 seconds (4)(5)	< 0.5 seconds (4)(5)
Time to engage brake	< 1 second (4)(5)	< 1 second (4)(5)
Emergency release fitting	M16 torqued to 350 Nm [M16 torqued to 258 lbf.ft]	M16 torqued to 350 Nm [M16 torqued to 258 lbf.ft]
Weight	47 kg [104 lbs]	34 kg [75 lbs]

(1) Do not run in brake, wearing the plates will reduce the static capacity.

(2) Dynamic use of the brake is not recommended and should only be used in emergency situations.

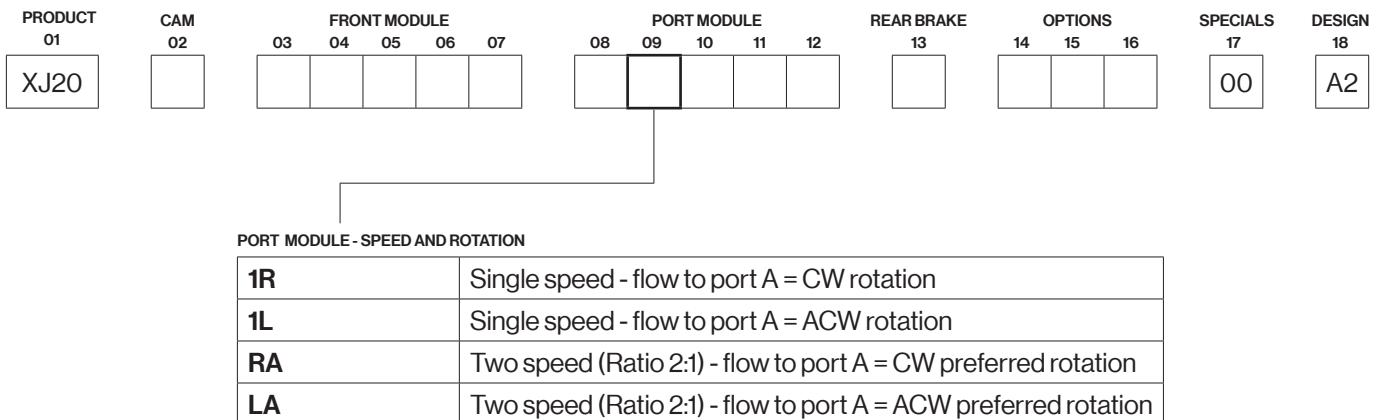

(3) The disc pack should be replaced after ten dynamic uses.

(4) Times may vary depending on fluid viscosity and valves used.

(5) During low temperature applications, flushing the brake housing is recommended to maintain a constant oil viscosity.

All data is based on ISO46 fluid at 50°C/122°F. If a different fluid will be used, please consult Rotary Power.

DIRECTION OF SHAFT ROTATION

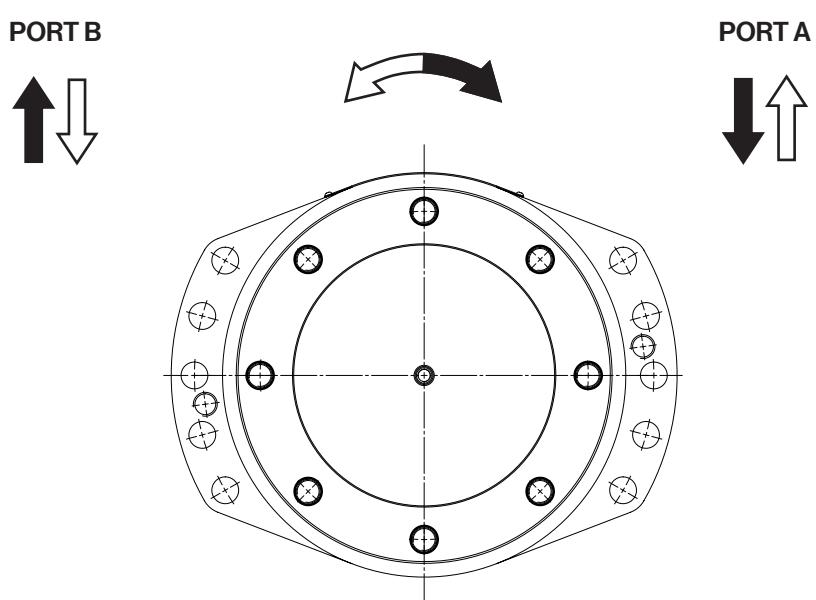

The XJ motor code defines the starting direction of the motor. This is selected by the customer to best suit their application needs.

The starting direction is based on flow being supplied to port A. A single speed motor can have its starting direction reversed by supplying flow to port B.

In two speed motors, pressurising port A is preferred as this prevents the motor from recirculating high pressure oil when shifted into second displacement. It is important to select the correct starting direction of a two speed motor to ensure optimum performance in the required direction.

DIRECTION OF SHAFT ROTATION VIEWED FROM THE SHAFT END

EXTRA OPTIONS

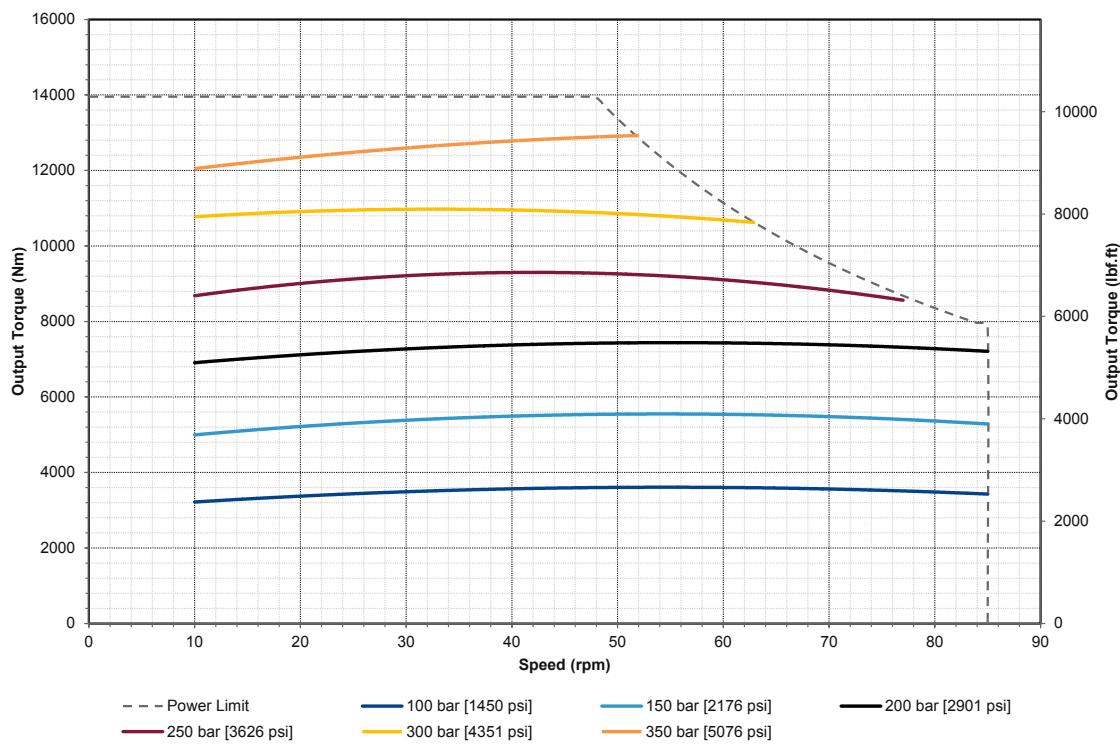

SPEED SENSOR

This sensor provides a square wave signal used to calculate motor speed. Note that the sensor target is constructed using a modified XJ20 rotor. Integrating the sensor target into the rotor allows the envelope of the motor to remain consistent with standard sizes.

Sensor type	Differential hall effect speed sensor
Rotary Power part number	W949000005
Supply voltage	8 – 32 VDC
Current consumption	<ul style="list-style-type: none"> Max. without load: 15 mA Max. with load: 30 mA
Plug type	AMP 282105-1, 3 pins <ul style="list-style-type: none"> Integrated cable and connector only Cable length (including connector): 350 mm ± 20 mm
Signal output	<ul style="list-style-type: none"> Square wave Push-pull outputs: $I_{max} = \pm 20$ mA <ul style="list-style-type: none"> - With pull-up resistor (for $R=560$ Ohm): $U_{low} < 2.5V, U_{high} > 0.95 * U_{supply}$ - With pull-down resistor (for $R=560$ Ohm): $U_{low} < 0.1V, U_{high} > U_{supply} - 4.0V$
Frequency range	5 Hz – 20 kHz
Standard number of pulses per revolution	60
Operating temperature	-40°C to +125°C [-40°F to +257°F]
Protection rating	<ul style="list-style-type: none"> Sensor head: IP68 Cable outlet: IP67

All performance graphs plotted for maximum displacement (2,505 cc/rev) using ISO46 fluid at 50°C.

CALCULATIONS

$$\text{Output torque (Nm)} = \frac{\text{Motor displacement (cc)} \times \text{delta pressure (bar)} \times \eta_m}{20\pi}$$

$$\text{Flow (lpm)} = \frac{\text{Motor displacement (cc)} \times \text{rotational speed (rpm)}}{1000 \times \eta_v}$$

$$\text{Output power (kW)} = \frac{\text{Output torque (Nm)} \times \text{rotational speed (rpm)}}{9,550}$$

Where:

η_m = Mechanical efficiency

η_v = Volumetric efficiency

For approximate estimates of performance use:

$\eta_m = 0.95$

$\eta_v = 0.95$

CONVERSIONS

Nm → lbf.ft = x 0.7376

N → lbf = x 0.2248

bar → psi = x 14.5038

cc → in³ = x 0.061

lpm → U.S. gpm = x 0.2641

kW → hp = x 1.341

kg → lb = x 2.2046
